

How to save money on each one of your products

- Doser in a precast works

The Doser is an efficient way to dispense concrete; it ensures a perfect measure every time.

Its main points are as follows:

- Speeds up Production Times
- Produces Consistent Products
- Eliminates Waste – No spilled Concrete/No over filling/No under filled breakages
- Increases Profits

The Doser allows you to produce consistent products, fast.

The Armcon Doser saves you money.

The Doser has a 0.5m³ holding hopper for fresh concrete. This can be dispensed using the foot pedal to activate the timed delivery feed.

The timed delivery controls the amount of concrete dispensed at any one time. This amount can be simply set on the control panel. The pedal or button on the panel dispenses the exact amount set by the control panel every time.

This means that you can produce products that are consistent-meaning less wastage through no overfilling, no spilled concrete and no under filled products that may be prone to break-saving you money.

Being in control of the amount of concrete that is used in your product means that you can be more efficient with your concrete than you were before.

Customers appreciate having precise uniform products – this goes a long way to ensuring continued, returning business.

The doser has been produced for easy clean and easy maintenance.

It has a modular design, fits on 1 pallet (meaning it is cheap to ship) and easy to build, by following simple instructions.

Features:

- 0.5m³ capacity hopper
- Dispensing height – 1 metre
- 1.14m² footprint
- Automatic or Manual Operation

ARMCON
CERTAINTY: IN CONCRETE

- 415v 3-phase electric motor
- Electric vibrator for consistent mixture flow
- Fully enclosed drive motor and gearbox
- IP rated electrics
